

The tap that does it all

100°C BOILING, COLD, CHILLED STILL
AND SPARKLING WATER - ALL FILTERED

New in
Hong Kong

Quooker®

What is a Quooker

A Quooker is pure convenience. It allows you to get 100°C boiling, hot, cold, chilled still and chilled sparkling water directly from tap - all filtered.

The Quooker system consists of a boiling water-tap on the worktop linked to a small tank in the kitchen cabinet. The tank acts like a vacuum flask connected to the water mains. The water in the Quooker tank is heated to a temperature of 108°C. When you turn on the tap, the water cools off a bit so that it is still truly boiling when it flows from the tap (100°C). While the water is flowing out of the tap, fresh water immediately flows into the tank. A special active carbon filter inside the tank further purifies the water.

Alongside the boiling water-tank Quooker also developed a system for filtered chilled- and sparkling water: the Quooker CUBE. This is an extra tank that is installed next to the boiling water tank in your kitchen cabinet. The CUBE contains a Hollow Fibre and an Active Carbon filter that purify the water. A CO₂ cylinder connected to the CUBE gives you 60 litres of chilled sparkling water. You have the choice of all in one taps with integrated mixer or Twintaps that have a separate mixer tap.

Why a Quooker

Dutch quality

It started in 1970 in The Netherlands with a simple yet revolutionary idea by Henri Peteri; boiling water from tap. And his invention is now an indispensable feature of the modern kitchen. Over a million Quooker users around the world enjoy the convenience of boiling and filtered water straight from the tap. And also – since the introduction of the Quooker CUBE – chilled, still and chilled sparkling water all filtered from the same tap. Quooker prides itself on being an innovation leader, proven by the many patents that protect our state of art concepts. And to ensure the highest quality all Quooker products are manufactured in our own factory in the Netherlands and come with a 2-year warranty. Our collection consists of various tap models in a variety of finishes. For every kitchen, we have a Quooker to match!

Convenience

A Quooker is pure convenience. No more waiting for the water to boil to make a cup of the tea or noodles, blanch vegetables, poach fish, steam dumplings, sterilize baby bottles and much more. Cleaning your pans becomes super easy and by adding the CUBE you have chilled still and sparkling water all from the same tap.

Filtered water

We understand the importance of good drinking water. Therefore the water in a Quooker is heated to 108°C to remove bacteria and is filtered through our special HiTAC® Active Carbon filter. Next to that you can add a NSF approved Active Carbon filter to get filtered room temperature drinking water. The CUBE, which dispenses chilled still and sparkling water, is equipped with a Hollow Fibre and an Active Carbon filter. These filters remove sediment, chlorine, bacteria, pesticides and other contamination which can negatively impact your drinking water. All this ensures that the water from a Quooker is always clean & fresh.

Time saving

With a Quooker you save precious time. Boiling water is instantly available. You can directly make your tea or start cooking. Because you always have good quality filtered drinking water available (even chilled still and chilled sparkling) you don't have the hassle of buying bottled water, or arranging water delivery to your home.

Space saving

A Quooker saves precious space on your worktop. The space occupied by a kettle can be freed up to slice, knead and chop. And you can finally get rid of that ugly water dispenser! The boiling water tank is compact and doesn't take much space so there's still usable space under your worktop or in your kitchen cabinet.

Renting your home

Even when you are renting you can have a Quooker! We will install the Quooker in your kitchen and when you decide to move, we can reinstall the original mixer tap in your old kitchen and install the Quooker in your new house.

Safest choice

'Boiling water, straight from the tap. Is that safe?' Actually the Quooker is the safest choice for every household. All Quookers are designed with a number of important safety features, including a childproof handle. The flow of water is delivered as an aerated spray, not a solid jet, preventing the risk of serious scalds or burns. And perhaps most importantly: a Quooker can't fall over, unlike a kettle or a pan.

Help the planet

By using a Quooker you cut back on single use plastic bottles that cause lots of pollution. You can be even more sustainable by adding a Quooker CUBE to eliminate the use of bottled sparkling water. The Quooker is extremely energy efficient, the standby power consumption is only 10 watts! This efficiency has resulted in Quooker having the best possible energy rating in Europe (A-rating). And last but not least we all know it's important to be economical with water. Yet, so many households unnecessarily waste water - for example if you boil twice as much water as you need. With a Quooker you always use the right amount of water and therefore avoid wastage.

Nordic Square Twintaps stainless steel

Using a Quooker

cooking rice
making tea
making instant noodles
boiling potatoes
filtered water
cleaning greasy pans
preparing baby bottle
poaching fish
making congee
cleaning chopping boards
making broth
preparing sauce
cleaning mixer
poaching vegetables
sterilizing pacifiers
steaming dim sum
skinning tomatoes
enjoy sparkling water
cleaning filter
sterilizing preserving jar
making cocktails
making soup

Choose your tank

Which tank suits your kitchen best?

Tanks

PRO3

Provides three litres of instant boiling water.

With the Quooker PRO3 you always have boiling water at hand.

Diameter: 150 mm
Height: 460 mm
Heating-up time: 10 minutes*
Power: 1600 W
Standby power consumption: 10 W
Volume 100°C: 3 litres
Mounting bracket available: yes

PRO7

Provides seven litres of instant boiling water.

With the Quooker PRO7 you always have boiling water at hand.

Diameter: 200 mm
Height: 470 mm
Heating-up time: 20 minutes*
Power: 2900 W
Standby power consumption: 10 W
Volume 100°C: 7 litres
Mounting bracket available: yes

COMBI+

Provides 7 liters of instant boiling water and unlimited hot water.

The COMBI + is connected to both the cold and hot water pipes. You no longer have to wait for hot water and you no longer waste drinking water. Thanks to the connection to the hot water pipe, you have unlimited hot water.

Diameter: 200 mm
Height: 470 mm
Heating-up time: 20 minutes*
Power: 2200 W
Standby power consumption: 10 W
Volume 100°C: 7 litres
Volume 60°C: unlimited
Volume 40°C: unlimited
Mounting bracket available: yes

*These values are averages.

Quooker CUBE

With the CUBE your Quooker not only gives cold, warm and boiling water, but also chilled still and sparkling water. It saves you time and space, it means you no longer need to use plastic bottles and it is completely safe. Push-wait-turn and the tap ring will light up blue for a flow of filtered chilled water. Push-turn and the tap ring will flash blue for a flow of filtered sparkling water. So it's impossible to dispense boiling water when you want sparkling water.

How does the CUBE work with a Quooker tank?

The CUBE is installed in the kitchen cabinet next to the Quooker tank. The CUBE is equipped with an active carbon filter and a hollow fibre filter. Both filters

together ensure a better water quality because they filter bacteria, chloride, chemicals and pesticides from the water. The filters in the tank have a lifespan of one year. When the tank starts to beep, it's time for new filters. You can order them through quooker.hk.

CO₂ cylinder

The CUBE is attached to a CO₂ cylinder that provides you with 60 litres of sparkling water from your Quooker tap. When the water jet slows down and there is less carbon dioxide in the water. It means that the CO₂ cylinder needs to be replaced. You can easily order a new cylinder set through quooker.hk. Used cylinders are returned to Quooker free of charge for refilling.

Height: 430 mm
Width: 235 mm*
Depth: 440 mm
Chilling time: 40 min
Standby power consumption: 12 W

*When the CO₂ cylinder is connected, 55 mm is needed on the front or side of the CUBE.

On quooker.hk you can easily put together your system. Choose a tap in the finish you want and combine it with a tank suitable for your situation. When composing, you can also add the CUBE for chilled and sparkling water. You will also find useful accessories such as a matching soap dispenser or powerswitch.

Quooker augmented reality app

The Quooker augmented reality app allows you to virtually place the tap of your choice in your own kitchen in a fun and easy way. This way you can instantly visualize how any Quooker tap will look and fit in your kitchen! It's easy, simply download the AR app by scanning the QR code below or search for it on the App Store or Google Play. Open the app and choose the tap you wish to see from the menu. Point your camera at the marker below and the tap will appear.

50 years and 50 patents
further we are still ahead
and a Quooker in your kitchen
has become indispensable.

1970

When he was working on the development of a new, instant soup for an international food company, Henri Peteri realised that instant soup could never be truly instant if you didn't have boiling water at hand. From this point on he remained focused on the concept, working at home, in his basement, to develop a device to produce instant boiling water.

1976

The first series of tanks - 40 pieces.

1985

After completing his studies, Henri's son Niels began working in his father's cellar. The idea became a product and the Quooker was born.

1993

Reinforced with his son Walter, also a law graduate, the product was launched commercially.

2000

The Quooker VAQ was launched in 2000. VAQ denotes the tank's revolutionary high-vacuum insulation. This insulation technology makes the Quooker highly energy- and compact, so that it can be easily fitted even in kitchens that have drawer units.

2005

For the introduction of the boiling water tap in the UK, we made a series of pictures showing only the tap and its uses against a black background. No kitchen setting, just huge white clouds of steam.

2015

Quooker opens its first office in the Middle East - Abu Dhabi and to celebrate the expansion to Arabia, Quooker launches a new finish in real plated 24k gold.

1970-1973

Despite his immense drive, he didn't manage to get any further than the prototype stage after several years of hard work. The appliance was hard to sell and broke down regularly.

1970-1976

The users of the prototypes were extremely enthusiastic. Those who had a Quooker could no longer do without it.

1978

After he had taken out his seventh mortgage on his home, the financial resources he needed to work on his invention had been depleted. Henri Peteri was forced to discontinue his project and go back to earning a living for his family.

1988

First set produced by Niels Peteri - 100 pieces.

1995

In December 1995 they bought a building on Staalstraat in Ridderkerk, even though the business was still making a loss. The adjacent buildings were purchased in 1998, 2001, 2002 and 2006 (including the mattress factory, which was turned into a production hall). And so, the Quooker continued to grow.

2004

In 2004, Quooker began exporting for the first time.

2006

The Quooker COMBI was introduced in 2006. Thanks to its insulation technology, the new model is 60% smaller and far more energy-efficient than other boiling or hot water equipment. More than half the Quookers now sold in the Netherlands are COMBI's.

2010

Introducing the Twintaps, a combined boiling water and mixer tap in the same design.

2019

With the new CUBE, you can now also dispense chilled sparkling and filtered water from your Quooker tap.

1972

The first patent

1976

The first series of taps 40 pieces were made with a safe detachable control knob.

1978

Prototype. IDEI design; The designers of the first Renault Espace.

1992

The Quooker Basic was launched in 1992. This was the first in a series of taps designed by Niels Peteri. The Classic followed in 1997, the Design in 1998 and the Modern in 2005.

1997

The Classic. The first addition to the tap collection.

2007

Henri Peteri died in 2007. During the last years of his life, he kept a low profile in the family business. What he considered to be his greatest achievement was that the three of them (Walter, Niels and himself) had worked so well together.

2012

After a long lead-up, we launched the Fusion in 2012. Because we had to work hard to dispel the idea that boiling water straight from the tap could be unsafe, we were hesitant to develop an 'all-in-one tap'. But we bit the bullet and in May 2012 we started handing over the very first Fusions to our dealers in person.

2020

The kitchen indispensable finally meets the East. Quooker opens the doors of its new office in Hong Kong. The first office in Asia.
